Wireshark packet capture showing a TCP SYN sequence. The packet list shows a SYN packet from 192.168.7.161 to 128.119.245.12 on port 61196. The packet details show the TCP header with SYN flag set and sequence number 9346553. The packet bytes show the raw TCP segment.

Frame 1139: 66 bytes on wire (528 bits), 66 bytes captured (528 bits) on interface \Device\NPF_{C723225E-A34C-478A-A13F-C4F58D51C31F}, id 0

```

The flag of the packet signifies that it is SYN

3. The Sequence number SYNACK is 2807728820. The value of the Acknowledgement field in SYNACK segment is 9346554. Gaia determined this value by incrementing the SYN Sequence number. We have an acknowledgement number of 1 in this SYNACK. This should mean that it successfully acknowledged the SYN argument.

```

5.

This TCP data segment was received at 15:56:21.424916000. The TCP ACK was received at 15:56:21.450840000. The RTT value is then 0.027244000 seconds.

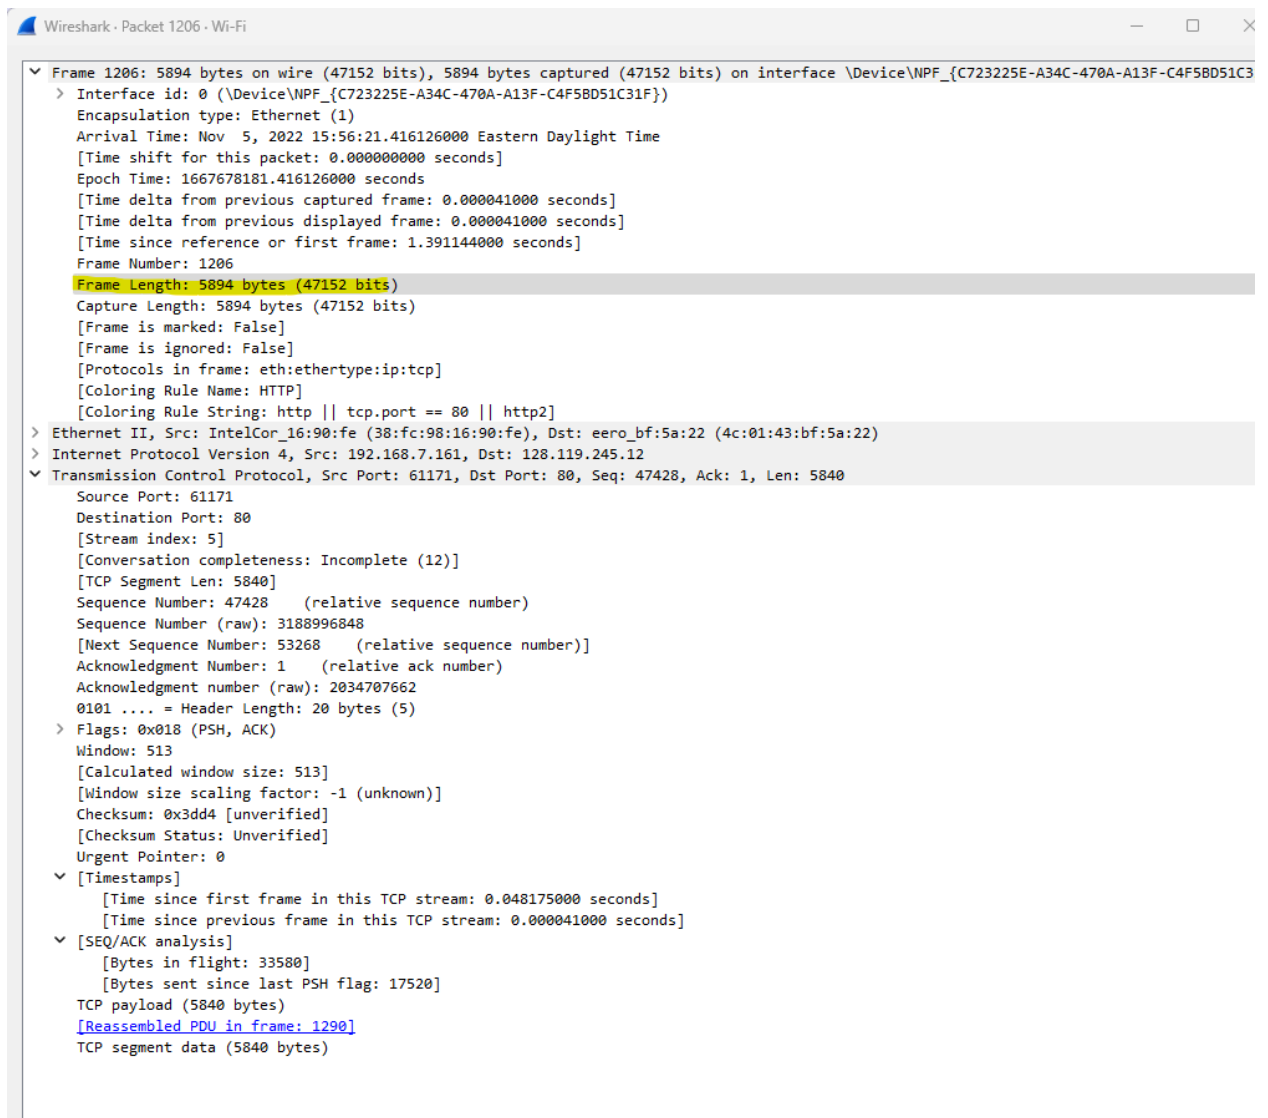

This TCP data segment was received at 15:56:21.43596000. The TCP ACK was received at 15:56:21.449937000. The RTT value is then 0.028359000 seconds.

This TCP data segment was received at 15:56:21.420331000. The TCP ACK was received at 15:56:21.447909000. The RTT value is then 0.028591000seconds.

The way I determined the 3 TCP segments is that I looked for packets in which my IP was uploading data, this means it would be the source. Then I would look at the Seq number of that ACK and find where the server IP has an Ack value of the Seq number from my IP address packet.

- The size of the available buffer space advertised at the receiver for the entire trace is 5894. It does not seem to throttle the sender.

- By getting the size of the file and dividing by the time of the entire TCP connection. I obtained this from the 200OK HTTP Protocol and checked the time since first frame. That value was 0.108253000 sec. I got the size of the file through windows file explorer and that was 149,000 bytes. Doing $149,000 / 0.108253000$ we get 1,376,405.272833085 bytes per second.
- For some reason the graph that I obtained is nowhere near the one that was given as an example. I think the reason might be because of the speed of my internet and computer. For this reason, I don't see a congestion or slow phase.
